Prediction	Statement (threat version, θ: $0 \rightarrow 0.7$)	Grid points	Informative (%)	Sign holds (%)	Strict monotone (%)	Candidate
P1	Threat raises leader acceleration (leader one stage from completion)	576	50	100	95	yes
P1_all	Threat raises leader acceleration (all leaders)	1,152	49	52	48	no
P1_far	Threat raises leader acceleration (leader $\geq$ 2 stages away)	576	48	3	3	no
P2	Threat raises laggard quitting	1,152	30	100	100	yes
P2_far	Threat raises laggard quitting (laggard $\geq$ 2 away)	1,152	30	100	100	yes
P3	Quit effect of threat: laggard > leader	1,152	54	54	52	no
P3_near	Quit effect: laggard > leader (near)	576	44	100	100	yes
P4	Acceleration effect: leader > laggard	1,152	67	66	60	no
P4_near	Acceleration effect: leader > laggard (near)	576	74	100	94	yes
P7	Laggard quits more than leader	1,152	97	100	100	yes
P8	Threat raises leader's first-launch probability	1,152	70	63	63	no
P8_near	Threat raises first-launch (near)	576	74	100	100	yes

Grid: 1,152 parameter points $\times$ 6 θ values $\times$ 3 equilibrium-selection rules. 'Informative' = the outcome moves with θ; 'holds' = end-point sign agrees among informative points; candidate = holds $\geq$ 90% and strict monotone $\geq$ 50% under all three selection rules.
